

291. DR 09-0276 — Schemas: annex-to-filename mapping missing

Status: Open

Subject: Schemas: annex-to-filename mapping missing

Qualifier: Editorial defect

Submitter: Editor

Contact Information: rex@RexJaeschke.com

Submitter's Defect Number: none

Supporting Document(s): none

Date Circulated by Secretariat: 2009-07-08

Deadline for Response from Editor: 2009-09-08

IS 29500 Reference(s): Part 1, §A and §B; Part 4, §A and §B

Related DR(s): none

Nature of the Defect:

Part 1, §A, "Schemas – W3C XML Schema", p. 4345 states, "This Office Open XML specification includes a family of schemas defined using the W3C XML Schema 1.0 syntax. The normative definitions of these schemas follow below, and they also reside in an accompanying file named OfficeOpenXML-XMLSchema-Strict.zip, which is distributed in electronic form."

Part 1, §B, "Schemas – RELAX NG", p. 4667 states, "This Office Open XML specification includes a family of schemas defined using the RELAX NG syntax. The definitions of these schemas follow below, and they also reside in an accompanying file named OfficeOpenXMLRELAXNG-Strict.zip, which is distributed in electronic form."

The same is true for Part 4.

However, nowhere is it stated as to which files in the accompanying zips correspond to which schema subclause in the annexes. Although one can deduce this mapping, it makes sense to state it explicitly.

Solution Proposed by the Submitter:

See below.
