Information technology — Document description and processing languages — Office Open XML File Formats —

Part 4: Transitional Migration Features

TECHNICAL CORRIGENDUM 1

Technologies de l'information — Description des documents et langages de traitement — Formats de fichier "Office Open XML" —
Partie 4: ...

RECTIFICATIF TECHNIQUE 1

Technical Corrigendum 1 to ISO/IEC 29500-4:2008 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology, Subcommittee SC 34, Document description and processing languages*.

It contains corrections that resolve various Defect Reports submitted against ISO/IEC 29500-4:2008.

A correction can involve changes to one or more clauses or subclauses; it can even apply to multiple Parts of ISO/IEC 29500. For changes to ISO/IEC 29500-4:2008, each such change has its own entry below.

Changes are presented in ascending clause, subclause, and page number order.

ISO/IEC 29500-4:2008/Cor.1:2009(E)**Notational conventions**

The title of each change is the complete reference to the clause or subclause being corrected. In all cases, the title begins with the clause or subclause number, the clause or subclause name, and the page number. In those cases containing changes to a particular row of a table, the value in that row's first column is appended to the title. As the lines in each XML schema subclause are numbered starting at 1 and going to the end of a schema, corrections to schemas also contain the numbers of the lines being corrected.

A change can contain any one or more of the following kinds of edits:

1. Addition of text: New text is displayed in blue and is underlined, as demonstrated here.
2. Deletion of text: ~~Deleted text is displayed in red and is struck through, as demonstrated here.~~
3. Change of format of text: Text whose format (but not its content) has changed is displayed in green and is double-underlined, as demonstrated here.

Many changes involve edits to large paragraphs, tables, and/or XML fragments. In such cases, the changes contain only as much unchanged content as is necessary to establish the correct context of each change. Omitted content is identified via the use of ellipses (...).

Within a change, intent that cannot be represented visually as an edit is written as an instruction in italic and delimited by curly brackets; for example: *{In paragraph 2, item 4, and in paragraph 4, make the numbers in the text “17–23” hyperlinked forward references to Clauses 17 and 23.}*

Contents

Introduction (For WG4 use only; will be removed from the final COR)	1

Introduction (For WG4 use only; will be removed from the final COR)

This Technical Corrigendum contains corrections that resolve various Defect Reports submitted against ISO/IEC 29500-4:2008.

A correction can involve changes to one or more clause or subclauses; it can even apply to multiple Parts of ISO/IEC 29500. For changes to Part 4, each such change has its own entry below, and the number of the Defect Report that lead to any particular change is written immediately following that change's title, in the form “[DR 99-9999]”. (This information is for the use of committee ISO/IEC SC 34/WG4 only, and will be removed from the final COR. However, a committee-private version containing the DR numbers will be made available for tracking purposes.)

Changes are presented in ascending clause, subclause, and page number order.

Changes

1. §1, “Scope”, p. 1

[DR 09-0225]

In general, this Part augments Part 1, and inherits the provisions of that Part. Exceptions to this are indicated explicitly.

2. §1, “Scope”, p. 1

...

[DR 09-0192]

The features described in this Part shall only be used by documents of conformance class WML Transitional (§2.1), SML Transitional (§2.1), or PML Transitional (§2.1). These features are sometimes needed for high-quality migration of existing binary documents to ISO/IEC 29500.

The intent of this Part is to enable a transitional period during which existing binary documents being migrated to ISO/IEC 29500 can make use of legacy features to preserve their fidelity, while noting that new documents should not use them. Part 1, §2.4, “Document Conformance”, states that WML Strict, SML Strict and PML Strict documents shall not use any of the features defined in Part 4.

This Part is normative for the current edition of ISO/IEC 29500, but is not guaranteed to be included in future revisions of that Standard. The intent is to enable the group responsible for maintenance of ISO/IEC 29500 to choose, at a later date, to remove this set of features from a revised version of that Standard.

3. §3, “Normative References”, p. 4

[DR 09-0031]

ISO/IEC 10646:~~2003~~, Information technology — Universal Multiple-Octet Coded Character Set (UCS).

4. §3, “Normative References”, p. 5

[DR 09-0225]

ISO/IEC 29500-1:2008, Information technology — Document description and processing languages — Office Open XML File Formats, Part 1: Fundamentals and Markup Language Reference.

5. §3, “Normative References”, p. 6

[DR 09-0031]

The Unicode Consortium. *The Unicode Standard, Version 5.0, defined by: The Unicode Standard, Version xx5.0 (Reading, MA, Addison Wesley, 2006. ISBN 0-321-48091-0)*, <http://www.unicode.org/unicode/standard>.

6. §3, “Normative References”, p. 6

Sperberg McQueen, Eve Maler, and François Yergeau (editors). *Extensible Markup Language (XML) 1.0, Fourth Edition.*¹ World Wide Web Consortium. 2006. <http://www.w3.org/TR/2006/REC-xml-20060816/>

¹ In the future, this reference may be replaced by the 5th edition once that has received broad acceptance.

7. §3, “Normative References”, p. 7

[DR 09-0170]

XML Namespaces, Bray, Tim, Dave Hollander, Andrew Layman, and Richard Tobin (editors). *Namespaces in XML 1.0*. World Wide Web Consortium. 20064. <http://www.w3.org/TR/2004/REC-xml-names11-20040204/> <http://www.w3.org/TR/2006/REC-xml-names-20060816>

8. §5, “Notational Conventions”, p. 10

[DR 09-0082]

The following typographical conventions are used in ISO/IEC 29500:

- The first occurrence of a new term is written in italics, ~~as in “normative”~~. [\[Example: The text in ISO/IEC 29500 is divided into normative and informative categories. end example\]](#)
- In each definition of a term in §4 (Terms and Definitions), the term is written in bold, ~~as in “behavior”~~. [\[Example: behavior — External appearance or action. end example\]](#)
- The tag name of an XML element is written using an Element style, ~~as in “document”~~. [\[Example: The bookmarkStart and bookmarkEnd elements specify ... end example\]](#)
- The name of an XML attribute is written using an Attribute style, ~~as in “id”~~. [\[Example: The dropCap attribute specifies ... end example\]](#)
- The value of an XML attribute is written using a constant-width style, ~~as in “CommentReference”~~. [\[Example: The attribute value of auto specifies ... end example\]](#)
- The qualified or unqualified name of a simple type, complex type, or base datatype is written using a Type style, ~~as in “xsd:anyURI”~~. [\[Example: The possible values for this attribute are defined by the ST_HexColor simple type. end example\]](#)

9. §9.9.4.8, “QUOTE”, p. 165, new subclause

[DR 09-0087]

9.9.4.8 QUOTE

This field retrieves the text specified by *text* in *field-argument*. In strict conformance mode, this text may include any other fields except SYMBOL. However, in transitional conformance mode, this text may include any other fields except AUTONUM, AUTONUMLGL, AUTONUMOUT, and SYMBOL.

10. §9.10.9, “Additional enumeration values for ST_NumberFormat (Part 1, §17.18.59), new subclause

[DR 09-0092]

Enumeration Value	Description
decimalFullWidth2 (Full Width Arabic Numerals Alternate)	<p>Specifies that the sequence shall consist of a set of full-width Arabic numbering.</p> <p>To determine the text that is displayed for any value, this sequence specifies a set of characters that represent positions 1–9 and then those same characters are combined with each other and 0 (represents the number zero) to construct the remaining values.</p> <p>The set of characters used by this numbering format for values 0–9 is U+FF10–U+FF19, respectively.</p> <p>For values greater than the size of the set, the number is constructed by following these steps:</p> <ol style="list-style-type: none"> 1. Divide the value by 10 and write the symbol which represents the remainder. 2. Divide the quotient of the previous division by 10 and write the symbol, which represents the remainder, to the left of the existing position. 3. Repeat step 2 until the remaining value is equal to zero. <p>[Example: The numbering for the items should be represented by the following pattern: 1, 2, 3, ..., 8, 9, 1 0, 1 1, 1 2, ..., 1 8, 1 9, 2 0, 2 1, ... end example]</p>

11. §9.10.10, “Additional member types for the union in ST_TextScale (Part 1, §17.18.95)”, new subclause

[DR 09-0202]

The value space of the following additional member types can be used within the context of this simple type for a document of a transitional conformance class.

- [The ST_TextScaleDecimal simple type \(§9.10.11\).](#)

12. §9.10.11, “ST_TextScaleDecimal (Text Expansion/Compression Percentage)”, new subclause

[DR 09-0202]

This simple type specifies that the percentage by which the contents of a run shall be expanded or compressed with respect to its normal (100%) character width, with a minimum width of 1% and maximum width of 600%.

[Example: Consider a run of text which must be expanded to 300% when displaying each character within the contents of the run. This constraint is specified using the following WordprocessingML:

```
<w:rPr>
  <w:w w:val="300"/>
</w:rPr>
```

This run explicitly declares that the w value is 300, so the contents of this run appear at 300% of their normal character width by expanding the width of each character. end example]

This simple type's contents are a restriction of the W3C XML Schema integer datatype.

This simple type also specifies the following restrictions:

- This simple type has a minimum value of greater than or equal to 0.
- This simple type has a maximum value of less than or equal to 600.

13. §10.3.2, “Additional attributes for dynamicFilter element (Part 1, §18.3.2.5)”, p. 183–184

[DR 09-0233]

10.3.2 Additional attributesAttributes with modified descriptions for dynamicFilter element (Part 1, §18.3.2.5)

The following additional attributes have modified descriptions when can be specified for a document of a transitional conformance class:

Attributes	Description
maxVal (Max Value)	<p>...</p> <p>These types of dynamic filters shall use val/<u>valIso</u> and shall not use maxVal/maxValIso: aboveAverage and belowAverage.</p> <p>...</p>

<u>Attributes</u>	<u>Description</u>
val (Value)	<p>A minimum numeric or serial date value for dynamic filter. (See description of valIso to understand when val is required.)</p> <p>If valIso and val are both present, valIso shall take precedence.</p> <p>The possible values for this attribute are defined by the W3C XML Schema double datatype.</p>
valIso (ISO Value)	<p>A minimum date value for dynamic filter. (See description of maxVal/maxValIso to understand when val/valIso is required.)</p> <p>The possible values for this attribute are defined by the W3C XML Schema dateTime datatype.</p>

14. §10.7, “Additional representation for dates and times (Part 1, Section 18.17.4)”

[DR 09-0274]

[For a document of a transitional conformance class, each unique instant in SpreadsheetML time shall be stored as an ISO 8601-formatted string or as a serial value.](#)

15. §10.8, “Formulas”, p. 186, new subclause

[DR 09-0016]

16. §10.8.1, “Attribute synonym for c element (Part 1, §18.6.1)”, new subclause

[DR 09-0016]

[The following additional attribute can be specified for a document of a transitional conformance class:](#)

<u>Attributes</u>	<u>Description</u>
ref (Cell Reference)	<p>An A-1 style reference to a cell.</p> <p>The possible values for this attribute are defined by the ST_CellRef simple type (Part 1, §18.18.7).</p>

[This attribute is semantically equivalent to r \(Part 1, §18.6.1\).](#)

[Only one or the other of r and ref can be defined in any given instance.](#)

17. §12.1.2.2, “Additional member types for the union in ST_Percentage (Part 1, §20.1.10.40)”, pp. 199–200

[DR 08-0001]

The value space of the following additional member types can be used within the context of this simple type for a document of a transitional conformance class.

- The ST_PercentageDecimal simple type ([Part 1, §20.1.10.41](#)[Part 4, §12.1.2.12](#)).

18. §12.1.2.12, “ST_PercentageDecimal (Percentage as Decimal Number)”, new subclause

[DR 08-0001]

This simple type represents a percentage in 1000ths of a percent, e.g., a value of 1 represents 0.001% == 0.00001; a value of 100000 is equal to 100%. Percentages have no intrinsic units, but are used to scale other values with units.

This simple type's contents are a restriction of the W3C XML Schema int datatype.

<u>Referenced By</u>
<u>ST_Percentage (Part 1, §20.1.10.40)</u>

[Note: The W3C XML Schema definition of this simple type's content model (ST_PercentageDecimal) is located in §A.4.1. end note]

19. §12.1.2.13, “Additional member types for the union in ST_PrSetCustVal (Part 1, §21.4.7.66)”, new subclause

[DR 08-0004]

The value space of the following additional member types can be used within the context of this simple type for a document of a transitional conformance class.

- The W3C XML Schema int datatype.

20. §12.1.2.14, “ST_TextBulletSizeDecimal (Bullet Size Percentage)”, new subclause

[DR 08-0007]

This simple type specifies the range that the bullet percent can be. A bullet percent is the size of the bullet with respect to the text that should follow it. $25000 = 25\%$, $400000 = 400\%$

This simple type's contents are a restriction of the ST_PercentageDecimal datatype (Part 4, §12.1.2.12).

This simple type also specifies the following restrictions:

- This simple type has a minimum value of greater than or equal to 25000.
- This simple type has a maximum value of less than or equal to 400000.

<u>Referenced By</u>
<u>ST_TextBulletSize (Part 1, §20.1.10.86)</u>
