DR 09-0042 — WML, Fonts: notTrueType attribute missing from list

Proposed Solution

Agreed; the following change will be made to §17.8.2:

ISO/IEC 29500 recommends that applications looking for the closest match to the following pieces of information (in descending priority) in order to determine a suitable alternative font; however, applications are free to apply more sophisticated logic in its place:

- panose1 (§17.8.3.13)
- sig (§17.8.3.16)
- charset (§17.8.3.2)
- pitch (§17.8.3.14)
- family (§17.8.3.9)
- altName (§17.8.3.1)
- notTrueType (§17.8.3.12)
